(54) **PRINTING DATA MANAGING DEVICE AND PRINTING DATA MANAGING METHOD**

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a printing data managing device capable of preventing resources on a printing requesting side from being used uselessly while suppressing cost.

SOLUTION: When a printing request receiving part 30 receives a printing request from a client 14, a queue operating part 32 adds the printing request to a printing wait queue 40 and disconnects connection with the client 14. When the printing request is made to be located at the leading address of the queue 40, a data receiving part 34 resumes connection with the client 14, after that, receives printing data corresponding to the printing request and stores them in a spool 38. A data transmitting part 36 eliminates the printing data that finishes printing from the spool 38.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of

rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
